## **Content Analysis of UN Speeches**

Project Title	Content Analysis of UN Speeches
Summary	Design a user-friendly database to analyze the content of UN speeches, UN products, and other texts. The database must be searchable so as to facilitate content analysis of these UN products.
Country	United States

## **Project Description**

The Office of UN Political Affairs in the International Organizations Bureau (IO/UNP) seeks a talented virtual student intern with the requisite data analysis and presentation skills to build a database with a user-friendly, searchable interface of various UN speeches, products, and other texts delivered by senior UN officials and representatives of other governments. Ideally, the database would have a user-friendly interface that can search and import key phrases/terms, and run text-immanent analyses on a range of policy question and hypotheses.

The creation of this database will create greater capacity, not only for IO/UNP, but of the entire State Department, to analyze the foreign policy positions of UN officials and member states.

## **Required Skills or Interests**

#### Skill(s)

Data analysis
Data visualization
Infographic design
Research

### **Additional Information**

None

# **Language Requirements**
